

**NOTICE TO CONSUMERS
OF THE
TOWN OF SALTVILLE
WATERWORKS**

We have been advised by State health officials of a failure to perform required monitoring in accordance with the Commonwealth of Virginia/State Board of Health *Waterworks Regulations*.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did not monitor for the disinfection byproducts total trihalomethanes (TTHM) and haloacetic acids (HAA5) in August 2015; therefore, we cannot be sure of the quality of our drinking water during that time.

One set of paired samples was required and none was collected. Routine sampling at the correct frequency is required to determine the quality of water delivered to our customers.

We will attempt to collect the required number of TTHM and HAA5 samples in August 2016.

State health officials feel there is little need for concern about the safety of your water because past records show that our system has had no documented problems with TTHM and HAA5 contamination; however, routine sampling and analysis are required to determine the quality of water delivered to our customers.

There is nothing you need to do at this time.

In accordance with State regulations aimed at increasing consumer awareness of conditions that exist in public water systems, we will report to you any future failure to comply with the regulations.

For additional information please contact:

T.M. Taylor (owner or operator)
PO BOX 730 (mailing address)
(276) 496-5342 (telephone number)

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
